Are you interested in having your pet's nails clipped while you are here today? Yes ___ No ___

Do you need a refill on any routine medications or prescription diets today? Yes ___ No ___

Has your pet ever had any reactions to any medications or vaccinations in the past? Yes ___ No ___

Are you interested in Wellness Blood testing for your cat today to fully assess his/her health? This is similar to the bloodwork you have at your own annual physical and helps identify hidden problems that may not be apparent on the physical examination. This is especially recommended for cats 7 years of age and older but is beneficial for cats of any age. It is particularly important if your pet receives any chronic medications including but not limited to thyroid medication (methimazole), kidney medication (calcitriol or subcutaneous fluids), and heart medications (Salix, enalapril). This testing includes a complete blood count (to check for anemia and infections) and a blood chemistry (which checks kidney function, liver function, for diabetes and many other illnesses) and a thyroid hormone level. If done at the time of your cat's yearly physical examination, the cost is only \$146.50. This is a savings of over 40% on the normal testing fees and includes FREE blood collection and sample submission.

Yes, tell me about Wellness Testing ___ No, I am not interested ___
